

Triumph Tiger 955i Airbox to ECU Vacuum Hose Kit

SKU: MC-TRI-MULTI-ECUVAC-T2201245

Revision: Rev A – May 2026

Thank you for purchasing the Tiger Forge Designs Airbox to ECU Vacuum Hose Kit.

Fitting Instructions

Fit the grommet into the airbox first. A little lubrication makes this easier – silicone grease or a small amount of dish soap does the job.

Run the hose from the airbox end to the ECU, following the same route as the original hose and push the hose fully onto the ECU connection, ensuring it pushes fully in.

Finally, push the elbow into the airbox grommet. Again, a little lubrication will make fitting easier.

IMPORTANT: The elbow expands the grommet slightly, creating a secure friction fit and a positive vacuum seal. Fitting the elbow into the grommet first makes assembly harder and increases the risk of damaging the elbow due to the additional force required.

You can use a couple of cable ties to secure the hose to the frame if required. **Take care not to overtighten them and crush the hose.**

Inspection Advice

During routine maintenance, inspect the hose and connections for signs of damage or loose fittings.
